# GRETA NORD-ISÈRE

**YOUR EUROPEAN FUTURE PARTNER  
IN VOCATIONAL TRAINING**

[GRETANI.COM](https://www.gretani.com)

do not litter on public roads

**Greta Nord-Isère** is part of a national network created by the Ministry of Education more than 50 years ago. It is a group of local public educational institutions (high schools and middle schools) that pool their human and material resources to organize adult training courses in an area defined by the local education authority of each academy. We provide training services in 7 main sites across the northern part of the Isère department.

Our goal is to promote **lifelong learning, professional retraining, and the integration or return to employment of all individuals** regardless of their status (aged 18 to 55), and also apprenticeship.

Our vocational training offer covers **many sectors** (<https://gretani.com/>) :

- **Industry:**
  - Chemistry Laboratories and Processes
  - Industrial Maintenance and Automotive Maintenance
  - Electricity
  - Metalworking and Welding
  - Process Control / Machine Operation
- **Tertiary and Trade**
- **Construction and project manager**
- **Health and social care:**
  - Early childhood
  - Personal assistance
  - Home help for the elderly and dependent persons

To encourage cultural openness among our trainees and enrich the professional practices of our trainers, we develop our international ambition.

We have created the International Mobility Support Service in charge of :

- Enabling the mobility of learners and/or teaching or administrative staff
- Creating partnerships in different European countries with:
  - Training centers
  - Companies
  - Local authorities

We are members of the **Erasmus+ Cera Pro consortium** and we are **ECHE certified**  
Our **International Mobility Advisors** are Catherine CHAUVIN and Isabelle TARNIER

We are located in the Chemistry Valley in Auvergne Rhône Alpes area, France's leading region for chemical production and exports. Chemistry accounts for a quarter of the AURA Region's exports worldwide, a rich regional innovation ecosystem representing 25% of national research in chemistry. It is a major exporter, with more than 80% of its turnover generated internationally, including nearly 70% to Europe.

Greta Nord Isère is an active member of CMQe Chimie AURA (**The Campus des Métiers et des Qualifications national label**) a network of professional actors who work together to develop a wide range of professional, technological and general training programs in Chemistry:

- at the secondary and higher education levels
- university and engineering schools
- continuing education for adults

In our training center in Vienne, we train apprentices and adults in different programs:

- **Laboratory Chemistry** after passing the Baccalauréat (Bachillerato en Espanol) during 2 years, half of the time working in a research and development chemical company
- **Production Chemistry** after passing the Baccalauréat (Bachillerato en Espanol) during 2 years, half of the time working in a chemistry company producing household products, papers, paints and varnishes, recycling chemical wastes.....
- **First level training and discovery of various careers in the chemical industry** for unemployed adults who seek a change in their career and can work as production operator in chemical industries.

To integrate the international dimension of the chemical industry into our training programs and to encourage learner mobility, we are developing a specific mobility project for these programs.

Our current priority projects are:

- **Job shadowing - 5 days in June 2026:**

Organisation of a first visit with a Spanish partner to :

- discover and compare our Education systems
- share innovative experiences of work with local companies
- exchange on how to integrate professional skills into our courses
- visit of a local chemical company

Our training manager and trainers are eager to exchange ideas with their counterparts.

*\*\*Welcome our partner in December 2026 (titre comme Job shadowing ou Small scale).*

*We will take the opportunity of spending a day in "Mondial des Métiers 2026", in Lyon (Vocational Exhibition presenting more than 700 professions and more than 100 000 visitors in 2025) to present our partners to France Chimie Aura leaders. They will meet our teachers, visit our laboratories and several companies we work with.*

- **Small scale partnership - 2027**

We would like to submit an Erasmus Small scale partnership project next year about innovative experiences tested by each partner, to adapt our vocational programs to the fast evolution of jobs in order to improve our learners employability.

We are looking for a partner who shares the same goals and is interested in this project.

- **Awareness of our students regarding the internationalization of the chemistry field and economy - during the school year 26-27and beyond:**

- Study of articles in English published in various countries
- Remote meetings in English with students from other countries or managers working abroad for their company

- **Organisation of an exchange program for our students in each country**

- June 2027 for French students (1 week)
- Autumn 2027 for the Spanish students

Our apprentices are prepared to enjoy this instructive experience.

**Our International Mobility Advisors are Catherine CHAUVIN and Isabelle TARNIER**
